2. STIMULATION PROGRAM

BP Carbon Solutions LLC (BP) is not proposing a stimulation program for the proposed injection wells at this time.

Stimulation to enhance the injectivity potential of the injection zone may be necessary for the injection wells in the future. Stimulation, as a general concept, may involve but is not limited to flowing fluids into or out of the wells, increasing or connecting pore spaces in the injection formation, or other activities that are intended to allow the injectate to move more readily into the injection formation.

If proposed, BP will provide advance notice and proposed stimulation procedures to the Underground Injection Control (UIC) Program Director in writing at least 30 days in advance, per 40 Code of Federal Regulations (CFR) 146.91(d)(2).
